

AGRISOFT | AIM

Commercial Egg Layers

Tracking flock costs and egg production has never been easier. Using AIM for egg production management, operations managers have the ability to view performance graphs and charts by flock with the click of a button. Identify issues and resolve problems when you choose to integrate AIM with your various data collection systems. Avoid having to wait a week to see flock data – gather it as it is generated.

Flock accounting in AIM is a breeze. Key data directly or integrate with your accounting system. Capitalize and Depreciate pullet costs without having to export data to Excel and rework the numbers. Review reports and get the information in and out of AIM when you need it.

Egg Management

Configure the Egg Units used by your organization. Customized Egg Types allow you to report and log production, shipment, and inventory for multiple types within the same flock. Generate standard tables for Egg Grade-Out in our Egg Matrix. Import data directly from your egg grading machines. Track outside egg purchases and costs. Pay contract egg producers on your schedule.

Feed Deliveries

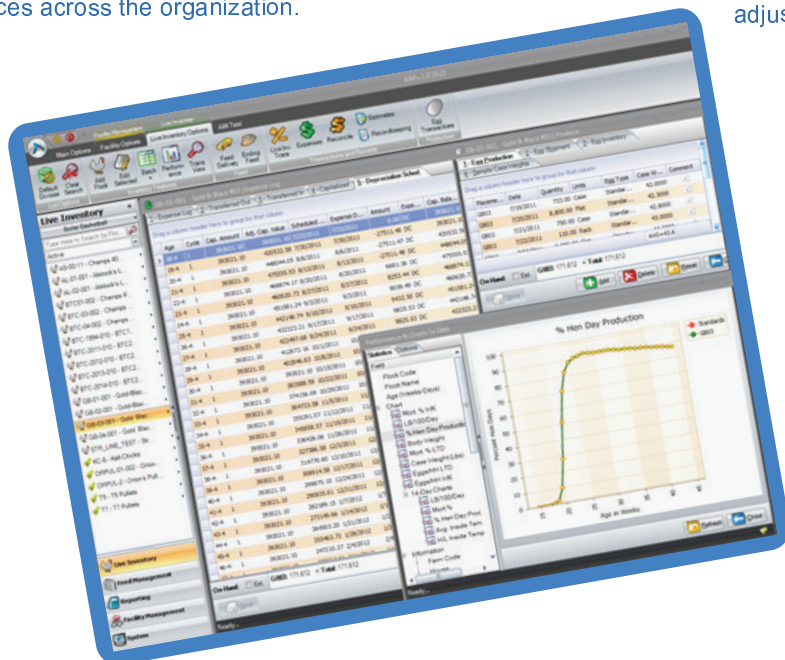

Import feed delivery data directly from your feed batching software. Integrate with your inventory system to get up to date formula and delivery pricing assigned to each delivery.

Integration is not an option? Easy methods of updating feed pricing for past deliveries allow you to change feed delivery prices across the organization.

Flock Accounting

For those who struggle tracking costs from pullet house to lay house, AIM resolves the traceability issues many companies struggle with. Record where flocks come from and where they go. Split flocks and multiple placements will not give the user a headache in reporting. Once the rules of the application are set, transfer the birds and all the expenses that go with them at once. Capitalize and Depreciate pullet and molt costs as per the rules set by your organization. Automatically send depreciation journal entries to your accounting software.

Expenses can be imported from your accounting system and distributed within AIM. Tracking and reporting by sex is available for breeder facilities. Accounting Close Dates give you the ability to lock each flock down by date, giving the control needed for proper flock accounting. Unlocking a flock is just as easy, allowing for adjustments when necessary.
