

AGRISOFT | AIM Turkeys

Designed to optimize of a full-scale turkey operation, AIM provides the tools needed for production management, feed scheduling, and live inventory performance. Transfer birds from one phase to the next, with complete traceability across all flock phases. Data is easy to gather or integrate with existing data collection systems. Reporting is a breeze with our completely customizable reporting tools. Simply tell the system how your operation works, and let AIM do all of the heavy lifting.

Feed Schedule

Manage flock feed information with feed deliveries and ending feed inventories. Feed deliveries can be recorded to a house or specific bin. Accurate calculation of feed usage. Interface with Feed Mill batching software, Feed Formula Pricing Software, and Feed Inventory Systems. Keep flocks on the same feed profile as they move from house to house. Handle sudden changes in weather or flock health in one location.

Data Capture

Capture Bird weights with detailed sampling and automated average calculations. Track house environment data. Log feed and population transactions for statistical reporting. Compare flocks and produce standard values for various expenses. Settle flocks across Brood, Grow, and Finish phases, or one phase at a time.

Flock Movements

Track live Poults, Toms, and Hens inventory transactions. Plan for Future Movements. Create future flocks with estimated placements and depopulations.
